

Thank you for taking time to review our DAT/EM software products.
There are a few file exchanges that need to be made to set up the demo.

Please do not start this process until you are ready to actually begin the software review.

Also, please tell us if there has already been a previous DAT/EM softlock demo on the computer that you are going to use for installation.

It may change the fingerprint setup version that you must use.

Here are the basic steps.

You have to be logged into the local machine that the fingerprint will be run on.

- **no Remote Desktop** log-in or **VPN sessions** are acceptable!

1. Download and run the **VC_Redist_8_27_2014_Setup.exe** on your computer and then reboot

2. Perform a **Windows update** and make sure the computer is current on the updates.

3. Download for Datem **Fingerprint 7.6 generator** version 01 file

4. Browse to the directory where you downloaded the file **DATEM_Fingerprint_76_01.exe**

- Run Datem_Fingerprint_76_01.exe.

(Run this as Administrator on the target computer to which you are going to install the demo.)

5. The DAT/EM Fingerprint dialog opens.

Make your selections to install the fingerprint generator.

6. The DAT/EM Fingerprint generator opens. Enter now the 5-digit lock number: **88912**

- This is **your demo license number** (**88912**)

7. Set the Path where the DAT/EM fingerprint file will be stored when created.

- Keep the lock number as part of the name, and keep the .fprint extension.

8. Select OK and email the .fprint file generated to DAT/EM Support at support@datem.com

A license file and installation serial number will be provided via email from DAT/EM Support as soon as possible.

The fingerprint that is generated is based on the hardware of your computer, once the fingerprint is generated, if you change the hardware of your computer (video card, monitor, hard drive, etc.) it may cause your demo fingerprint and license to become invalid and stop working. You would then need to generate a new fingerprint with the new hardware and receive a new license.

You may download the **version 7.6 beta** software to prepare for installation.

Please do not hesitate to contact Support with any questions, problems, or suggestions regarding the software products you review.

We look forward to working with you.

Best regards,

Chad Carpenter
